CARBIDE BURS
Even Cut burs are manufactured on CNC machines creating the most consistent product available. Premium grade carbide is used to create the toughest bur that won't chip while providing exceptional tool life. We offer a diverse line of burs for your specific application. Single and double cut products are designed for ferrous materials. The non-ferrous design quickly removes unwanted material in aluminum, plastic and brass.
See our application and speed chart on page 19 to assist in the proper tool selection.

cylinder carbide bur

| descrip. | head <br> dia. | cut <br> length | shank <br> dia. | overall <br> length | single <br> cut | double <br> cut | non <br> ferrous | profile |
